Applications

- **IF/RF Amplification**

Description

The 2031 Series is a wideband thin-film bipolar RF amplifier using resistive feedback and active bias for temperature compensation and increased immunity to bias voltage variations. Low input/output VSWR is maintained by inductive tuning, and internal blocking capacitors couple the RF through the amplifier. The 2031 Series amplifiers are available in either the TO-8 hermetic case or connected TC-1A package.
